# Uvod

## Korisceni programski jezici

Korisceni programski: PHP,HTML, CSS, JavaScript, jQuery, Ajax, XML, XSL,JSON.

## Opis funkcionalnosti

1. Registracija- posetilac sajta moze da se registruje tako sto ce mu se klikom na register link u meniju otvoriti stranica za registraciju, gde moze da unese svoje podatke. Klikom na register pomocu regularnih izraza na strani klijenta (javascript) se proverava unos podataka , a zatim ajaxom salje do php stranice za proveru unosa gde se jos dodatno povecava nivo zastite zbog moguceg sql injection-a. Posle uspesnog upisa u bazu podataka salje se mail za potvrdu registracije.
2. Logovanje- posetilac koji je uspesno prosao fazu registracije mora prvo da potvrdi registraciju klikom na link u poruci koja mu je poslata , pa kada to uradi moze slobodno da se uloguje na svoj nalog. Naravno I ovde su primenjeni regularni izrazi na klijentskoj strani kao I na serverskoj.

3. Uredjivanje profila- kada je posetilac uspesno prosao fazu logovanja sajt ga direktno redirektuje ka stranici njegovog profila. Tu moze da vidi svoje podatke koje je uneo , datum registracije I profilnu sliku. Na profilnoj stranici se takodje nalazi I dugme za uredjivanje profila. Klikom na dugme prikazuju se dodatna polja u koja upisuje nove podatke za izmenu postojecih. Takodje moze promeniti I profilnu sliku.
4. Pretraga- posetiocu je omogucena pretraga galerije slika koja je ukombinovana zajedno sa tekstom. Princip rada pretrage je takav da se ajaxom samo jednom kontaktira baza, selektuju se sve slike iz baze I skladite u JSON object, a zatim se radi pretraga JSON objecta u zavisnosti sta je korisnik uneo uz minimalno opterecenje baze.
5. Admin panel- pristup admin panelu imaju samo oni korisnici cija je uloga administrator ili moderator. Ceo admin panel radi pomocu ajax-a. Pomocu admin panela je moguće menjati ceo sadrzaj sajta sem statickih stranica kao sto su stranice za registraciju, pretragu I igricu.
6. Galerija slika- nad galerijom slika primenjeno je stranicenje gde je u zavisnosti od broja slika prikazana navigacija sa brojevima. Potpuno je dinamicno, a ono najbitnije jeste sto se pomocu ajaxa dohvata limitiran broj slika I prikazuje ih korisniku bez ikakvog osvezavanja stranice. Takodje nad galerijom je primenjen I jquery gallery plugin.
7. Anketa- realizovana je pomocu tekstualnog fajla, php-a I ajaxa. Kada posetilac udje na sajt (na bilo koju stranu) nakon par sekundi pojavljuje se anketa. Klikom na dugme submit ajaxom se kontaktira php stranica pomocu koje se upisuje ip adresa korisnika zajedno sa njegovim glasom. Sledeci put kada bude ulazio taj isti korisnik proverom njegovog ip-a kod ce odluciti da ne prikaze anketu.
8. Igrica iks oks- najsladje za kraj 😊 Igrica iks oks koja je realizovana pomocu javascripta (jQuery). Moguce je igrati u modovima Single player I Multiplayer. Single player mod gde korisnik igra protiv kompjutera tj. (protiv mog koda!.. uvek ga pobeđe 😞). Sa druge strane postoji I

multiplayer mod gde registrovani korisnik moze da generise link a zatim taj link posalje svom prijatelju protiv kojeg hoce da igra.

## Template

- Meni
- Wrapper
- Footer

The screenshot shows a web application template for a Tic-Tac-Toe game. The main content area has a teal background with a hexagonal pattern. In the top-left corner, there is a 'Menu' button with a hamburger icon. The center of the page features a 3x3 grid for the game, with the words 'TIC-TAC-TOE' written in large, white, hand-drawn letters across the cells. To the right of the grid are two buttons: 'Play against computer' and 'Play with friend'. Below these buttons is a dark modal dialog box with the title 'Do you like to play Tic Tac Toe ?!' and two radio button options: 'Yes' and 'No', with a 'Submit vote' button at the bottom. Below the teal section, there is a white section with the heading 'TIC-TAC-TOE' and a paragraph of text: 'You probably already know how to play Tic-Tac-Toe. It's a really simple game, right? That's what most people think. But if you really wrap your brain around it, you'll discover that Tic-Tac-Toe isn't quite as simple as you think! Tic-Tac-Toe (along with a lot of other games) involves looking ahead and trying to figure out what the person playing against you might do next.' Below the text is a 'Play game!' button. At the bottom, there is a dashed line and a grey section with the heading 'RULES FOR TIC-TAC-TOE'.

```

### TIC-TAC-TOE

You probably already know how to play Tic-Tac-Toe. It's a really simple game, right? That's what most people think. But if you really wrap your brain around it, you'll discover that Tic-Tac-Toe isn't quite as simple as you think! Tic-Tac-Toe (along with a lot of other games) involves looking ahead and trying to figure out what the person playing against you might do next.

Play game!

#### RULES FOR TIC-TAC-TOE

- 1 The game is played on a 3x3 grid.
- 2 You are X, your friend (or the computer) is O.
- 3 The first player to get 3 of their symbols in a row, column, or diagonal wins.
- 4 When all 9 squares are full, the game is a draw.

1. Dinamicki sadržaj (text) koji se dovlaci iz baze podataka. Ovaj text I text na svim ostalim stranicama je moguće menjati , dodavati ili brisati pomoću admin panela.
2. Da ne bih ponavljao na svakoj stranici se nalazi isti meni: Klikom na meni ikonicu prikazuje se meni koji sadrži dinamičke linkove koje također dovlaci iz baze I isto tako ih je moguće menjati, dodavati, brisati. Takođe se nalazi forma za logovanje I forma za pretragu.
3. Na svakoj stranici će se prikazivati anketa koja je realizovana pomoću text fajla, php-a I ajax-a. Radi po principu uzmi ip posetioca, proveri u da li postoji takav ip unutar text fajla ako ne postoji prikazi anketu odnosno ako postoji sakrij. Odmah posle glasanja izlaze rezultati koji se isto dovlace pomoću ajaxa.
4. Footer u kome se nalazi dinamički meni.

About.php

About

### About TIC-TAC-TOE

Tic-tac-toe (also known as noughts and crosses or Xs and Os). Tic-tac-toe is a fun game that you can play any time and anywhere as long as you have a piece of paper, a pencil, and an opponent. Tic-tac-toe is a zero sum game, which means that if both players are playing their best, that neither player will win. However, if you learn how to play tic-tac-toe and master some simple strategies, then you'll be able to not only play, but to win the majority of the time. The player who succeeds in placing three of their marks in a horizontal, vertical, or diagonal row wins the game.

### Tic-tac-toe like pedagogical tool

Because of the simplicity of tic-tac-toe, it is often used as a pedagogical tool for teaching the concepts of good sportsmanship and the branch of artificial intelligence that deals with the searching of game trees.

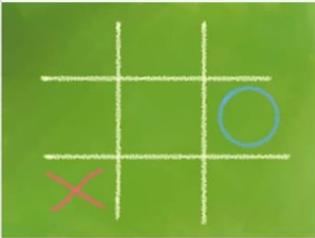

# 1. Dinamicki sadrzaj. Sav text se dovlaci iz baze.

## Strategies.php

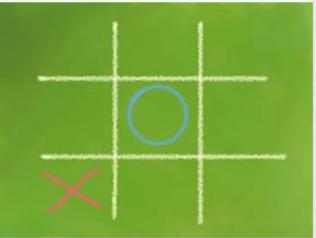

Menu Strategy Gallery

### Tip 1

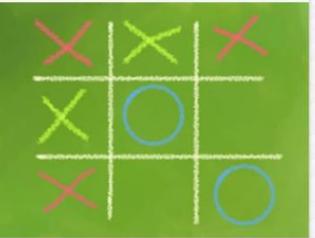

Play your first X in a corner. Most experienced tic tac toe players put the first "X" in a corner when they get to play first. This gives the opponent the most opportunities to make a mistake. If your opponent responds by putting an O anywhere besides the center, you can guarantee a win. In this example, you are going first, and using X as your symbol. Your opponent goes second, and uses O.

### Tip 2

Try to win if your opponent plays the first O in the center. If your opponent plays her first O in the center, you have to wait for her to make a mistake before you can win. If she continues to play correctly, she can guarantee a tie. Here are your two options for your second move, followed by instructions on how to win if she makes certain moves (if she doesn't, just keep blocking her plays and the game will be a tie)

### Tip 3

Place your second X in the opposite corner from your first, so there's a line going "X O X" diagonally across the board. If she responds with an O in one of the other corners, you can win! Place your third X in the last empty corner, and your opponent won't be able to block you from winning with your fourth X.

1 2 3 4

1. Dinamicka galerija sa stranicenjem. Cela logika se zasniva na tome da se ajaxom kontaktira php stranica koja uzima svaka tri zapisa iz baze podataka, vrati javascriptu a on prikaze u stranici. Donja navigacija sa brojevima se racuna na osnovu broja zapisa I broj koliko ce se njih prikazati.
2. Koriscen je gallery jquery plugin koji uvelicava sliku kada se klikne na nju. A dodatna opcija je navigacija do ostalih slika sa opcijama next I prev. Ovaj kod vezan za plugin sam preuzeo.

## Author.php

Menu About author

**Aleksa Jovanovic**

Since childhood Aleksa Jovanovic showed interest in computers. After completing primary school "Miloje Vasic", Aleksa has enrolled High School of Electrical Engineering "Rade Koncar", where he became even more interested in programming. Now he enrolled in the second year of vocational studies at ICT college. He hopes that He will successfully finish this vocational studies and enroll Specialist Vocational Studies.

**Contact Form**

Name  Email

Message

SUBMIT

1. Na ovoj stranici se dovlaci dinamicki text o autoru. On se moze menjati, brisati ili dodavati.
2. Kontakt forma pomocu koje posetilac moze da kontaktira autora. Unos forme se proverava pomocu regularnih izraza na klijentskoj strani (jquery), ako je sve dobro uneto podaci se salju na php stranicu putem ajax-a gde se dodatno proveravaju regularnim izrazima, a onda se prosledjuju mail funkciji koja salje mail autoru.

1. Omogućena registracija posetilaca. Radi pomoću ajax-a koji zajedno sa php-om kontaktira bazu i pri tačnom unosu podataka upisuje podatke u bazu. Svi podaci se proveravaju sa obe strane (i klijentske i serverske) vrši se dodatna zaštita protiv sql injection-a. Ono što je bitno jeste to da Email mora biti unikatna pri registraciji. Ako Email već postoji u bazi, posetilac se ispisuje dodatna poruka koja ga obavestava da promeni unos za mail, jer je taj već zauzet. Kada se izvrši upis u bazu pomoću mail funkcije se šalje mail novoregistrovanom korisniku da potvrdi u suprotnom neće moći da se uloguje. Link koji se generise pri slanju maila nastaje pomoću njegovog mail-a i slučajnog broja.

## AdminPanel.php

The screenshot shows the Admin Panel interface. At the top, there is a teal header with a hamburger menu icon and the text "Menu" on the left, and "Admin Panel" on the right. Below the header is a dark blue navigation bar with four tabs: "Menu manager" (highlighted in teal), "Page text manager", "Gallery manager", and "User manager". The main content area is titled "Manage menu" and contains the following text: "Here you can edit text that will display as menu and change position of menu elements by dragging it!". Below this is a note: "Note: When you want to update/change position of menu-item you can do it by clicking on draggable object with the mouse and dragging it to top or bottom!". The menu items are displayed as a vertical list of five buttons: "Home", "About", "Strategy Gallery", "Author", and "Register". At the bottom of the main content area, there are four buttons: "Add menu item", "Edit menu", "Delete menu item", and "Change item order". The footer of the page is dark blue and contains a teal home icon, followed by the text "Home", "About", "Strategy Gallery", and "Author".

1. Admin panel- se sastoji od cetiri sekcije (Menu manager,Page text manager,Gallery manager,User manager). Kao sto I sama imena sekcija govore moguće je upravljati celim sadržajem sajta. Ceo admin panel radi pomocu ajax-a. Admin unese,ako je dobar unos ajax prosledi php-u, php takodje proverava unos poveze se sa bazom I upise,izbrise ili izmeni odredjenu kolonu u tabeli unutar bazi podataka.
2. Menu manager- izmena,dodavanje I brisanje meni stavki iz menija. Takodje je dodata opcija za promenu rasporeda meni stavki.
3. Page text manager- izmena, dodavanje I brisanje texta sa stranica. Pri pokretanju ove kartice prikaze se dijalog koji trazi da admin izabere stranicu koju zeli da menja. Putem ajax-a se dohvataju postojeće kolone unutar tabele za izabranu stranicu. A onda admin moze da pocne sa administriranjem te stranice.
4. Gallery manager – dozvoljava brisanje I dodavanje novih slika u galeriju. Putanja I ime slike se cuva unutar baze podataka. Kada se otvori kartica za administriranje galerije I stisne na dugme load gallery pocinju da se prikazuju sve slike iz baze pomocu ajax-a. Kada admin pokusava da upload-uje sliku, vrsi se provera formata slike na klijentskoj strani, isto tako I na serverskoj strani samo sto se jos dodatno proverava I velicina pa ako je sve uredi, vrsi se upload slike na server, a putanja slike I ime slike se cuvaju unutar baze.
5. User manager- Potpuna administracija korisnika. Dodavanje,brisanje izmena postojecih pomocu ajax-a. Moguca je promena lozinke( koristi se

posebna biblioteka javascripta..Napomena : da bi se menjala lozinka mora se cekirati jos jedno dodatno polje) kao I promena uloge korisnika.

Search.php

Menu

two

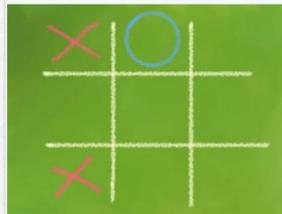

6 items found!

Tip 2

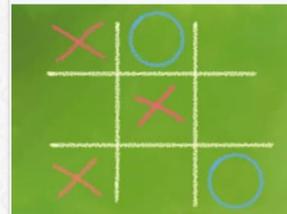

Try to win if your opponent plays the first O in the center. If your opponent plays her first O in the center, you have to wait for her to make a mistake before you can win. If she continues to play correctly, she can guarantee a tie. Here are your **two** options for your second move, followed by instructions on how to win if she makes certain moves (if she doesn't, just keep blocking her plays and the game will be a tie)

Tip 5

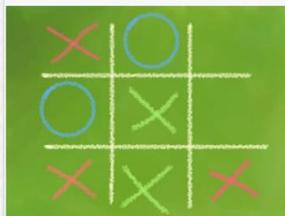

Win automatically if your opponent plays his first O in any square besides the center. If your opponent puts his first O in any square besides the center, you can win. Respond by putting your second X in any other corner, with an empty space in between the **two** X's.

Tip 6

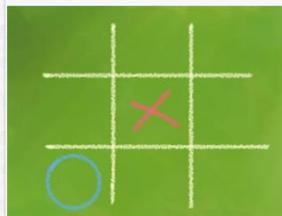

Place your third X so you have **two** possible winning moves. Most of the time, your opponent will see that you have **two** X's in a row and block you. (If not, just win by making a row of three X's.) After this happens, there should be an empty square that is in line with both your first and your second X, with no enemy O's blocking that line. Put your third X in this square.

Tip 7

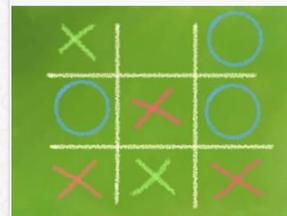

Win with your fourth X. After your third X, there are **two** empty squares that will win you the game if an X goes into one of them. Since your opponent can only make one move, he can only block one of those squares. Write your fourth X into the square he didn't block, and you've won the game!

Tip 8

Force a draw if the opponent starts in the corner. If the opponent plays first and starts with an O in a corner, always put your first X in the center. Your second X should be placed on an edge, not a corner, unless you need to block your opponent from getting three in a row. Using this strategy, every game should be a draw. Theoretically, you can win from this position, but your opponent would have to make a huge mistake, such as not seeing that you have **two** X's in a row.

Tip 10

Try to win if the opponent starts at the edge. Most of the time, your opponent will start with one of the moves above. However, if your opponent puts down the first O on an edge, not on a corner or center, you have a small chance to win. Put your first X in the center. If your opponent puts the second O on the opposite edge, making a row or column that reads O-X-O, put your second X in a corner. Then, if your opponent puts the third O in the edge that is adjacent to your X, making a line that reads O-X-O, put your

1. Omogućena pretraga galerije slika zajedno sa text-om. Pretrazi se pristupa pomoću forme iz menija gde se takođe proverava unos sa klijentske strane. Pretraga je zasnovana po principu korisnik unese nešto unutar forme. Javascript putem ajax-a pošalje zahtev php stranici koja dohvati sve redove iz baze podataka i vrati ih javascriptu. Javascript skladišti odgovor php stranice u JSON objekat i onda kreće u pretragu tog JSON objekta. Pretraga na stranici pretraga radi sa događajem onkeyup, što znači da bi ajax-om svaki put kada je stisnuto dugme kontaktirali bazu i samim tim bi je preopteretili. Pa sam zato izvršio jedan upit i ceo odgovor stavio u JSON objekat a zatim radio pretragu tog objekta.

Edit profile

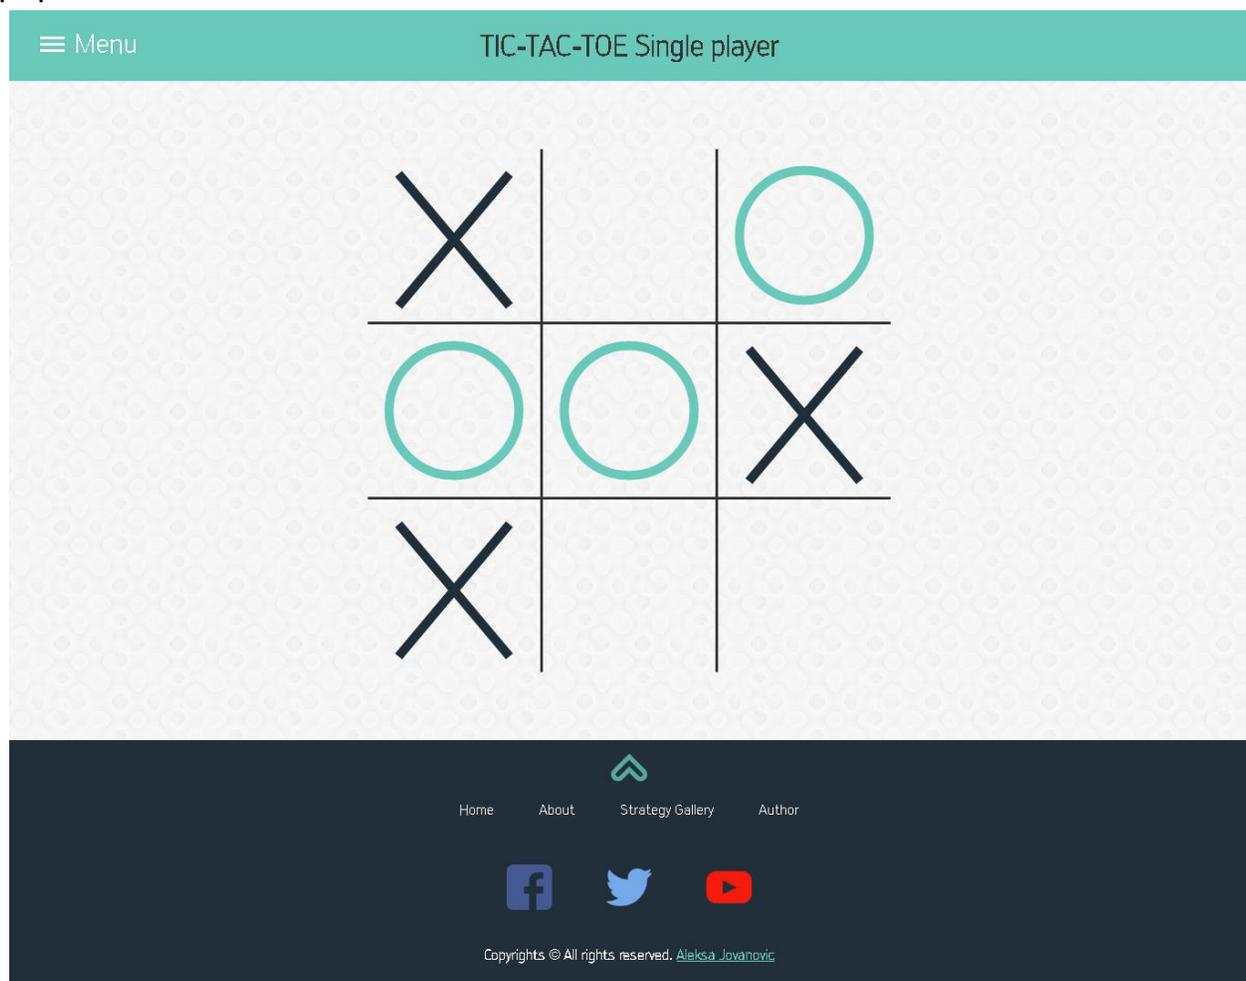

1. Prikaz profila korisnika-svi vezani podaci za ulogovanog korisnika se prikazuju na ovoj stranici zajedno sa profilnom slikom. Korisnik ima mogucnost da promeni svoje podatke klikom na dugme edit profile. Prikazuju se dodatna polja u koja moze da unese nove podatke. Ovi podaci se proveravaju na obe strane I upisuju u bazu. Upload slike vrsi se pomocu ajax-a, a pri upload-u se proverava tip slike kao I velicina slike.

generateLink.php

1. Ovoj stranici pristupaju samo autorizovani korisnici. Klikom na generate link dugme generise se link a samim tim I vrsi upis u bazu za multiplayer iks oks. Link se generise na osnovu korisnickog id-a I slucajnog broja. Dalje se prikazuje dugme za kopiranje link-a da bi korisnik mogao da posalje to svom prijatelju protiv kojeg bi igrao. Kada je onaj korisnik kojem je prosledjen link klikne na njega. Unutar baze se upise slucajni broj kao njego identifikator I igra moze da pocne.

ticTacToe.php

1. Single-player- ovaj mod omogućava korisniku da igra protiv kompjutera. Celu logiku igranja kompjutera sam ja osmislio I napisao u javascriptu(jQuery). Korisnik prvi igra I svaki put kada odigra svoj potez kod proracuna sledeci korak, upise u matricu tj. odigra ga I pomocu ajax-a ispise znak oks na tabli. Nakon odigrane partije pokazuje se dijalog koji vodi u dva pravca ili na pocetnu stranicu ili igranje ispocetka.
2. Multiplayer- ovaj mod omogućava korisniku da generise link na stranici generateLink.php I posalje prijatelju protiv kojeg hoce da igra. Kada oba korisnika pristupe stranici za igranje igre, od tog trenutka otpocinje njihova sesija u koju se upisuje svaki potez odigran na tabli. Logika ovog koda je takva da kada korisnik 1 odigra potez taj potez se upise u bazu pomocu ajax-a I php-a zatim upise prethodni potez u sesiju I ceka na potez korisnika 2. Da bi korisnik 2 video sta je korisnik 1 odigrao prisutna je funkcija refreshTable koja vrsi ajax long pooling. To znaci da na svakih 2-3 sekunde salje ajax zahtev php stranici koja kontaktira bazu I tako proverava da li je korisnik 1 odigrao svoj potez ako jeste prikaze ga I omogućava korisniku 2 da odigra svoj potez I tako u krug dok se partija ne zavrsi. Kada se partija zavrsi, opet putem ajaxa I php-a kontaktira se baza I brise se red koji je bio vezan za tu partiju nakon toga se prikazuje dijalog koji vodi u jednom smeru a to je pocetna stranica.
